

Character animation: Interactives

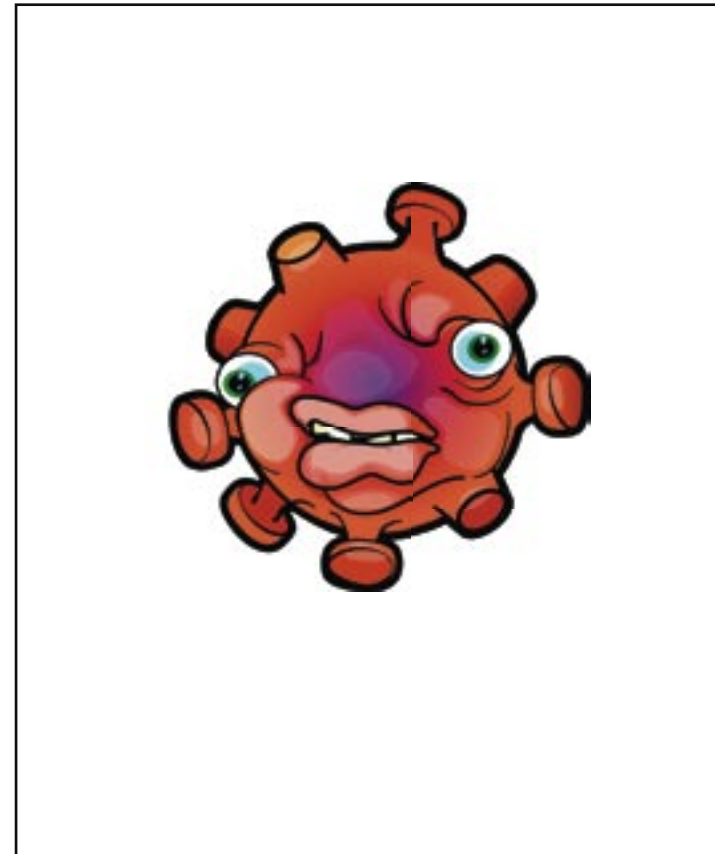

The Singapore Science Centre is a non-formal educational institution for the promotion of science and technology to students and members of the public.

It has more than 1000 interactive exhibits in seven themed galleries that provide enthralling insights into the physical and life sciences.

Newangle were commissioned to create 3 interactives for a new exhibition called 'Living with Viruses'.

6 animated characters were created based on the scientific attributes of each virus. Virus interviews allows the visitor to ask questions of each virus and watch an animated voiced virus character give the answers.

Two viruses, Flu and HIV, were created to appear to be trapped in a tank, when the visitor approaches from one of 3 sides the virus appears in front of them and speaks to the visitor.
